

TRANSIMS Version 5 Software Architecture

January 20, 2011

David Roden – AECOM

Topics

- Goals and objectives
- Standard template library extensions
- Code organization and consolidation
- Program service hierarchy
- Typical program linkages
- Path building and simulation services
- Multiple threads, DLL, and MPI

Goals and Objectives

- Make the code easier for new programmers to understand, modify and build upon
 - Standard Template Library
 - Centralize codes, standardize and automate processing
 - Expand and simplify programmer support services
- Make the code safer and more robust
 - Eliminate re-defined data classes and application differences
- Improve performance and reduce run times
 - Utilize multiple cores and MPI clusters
- Create DLL services for linkages to other software

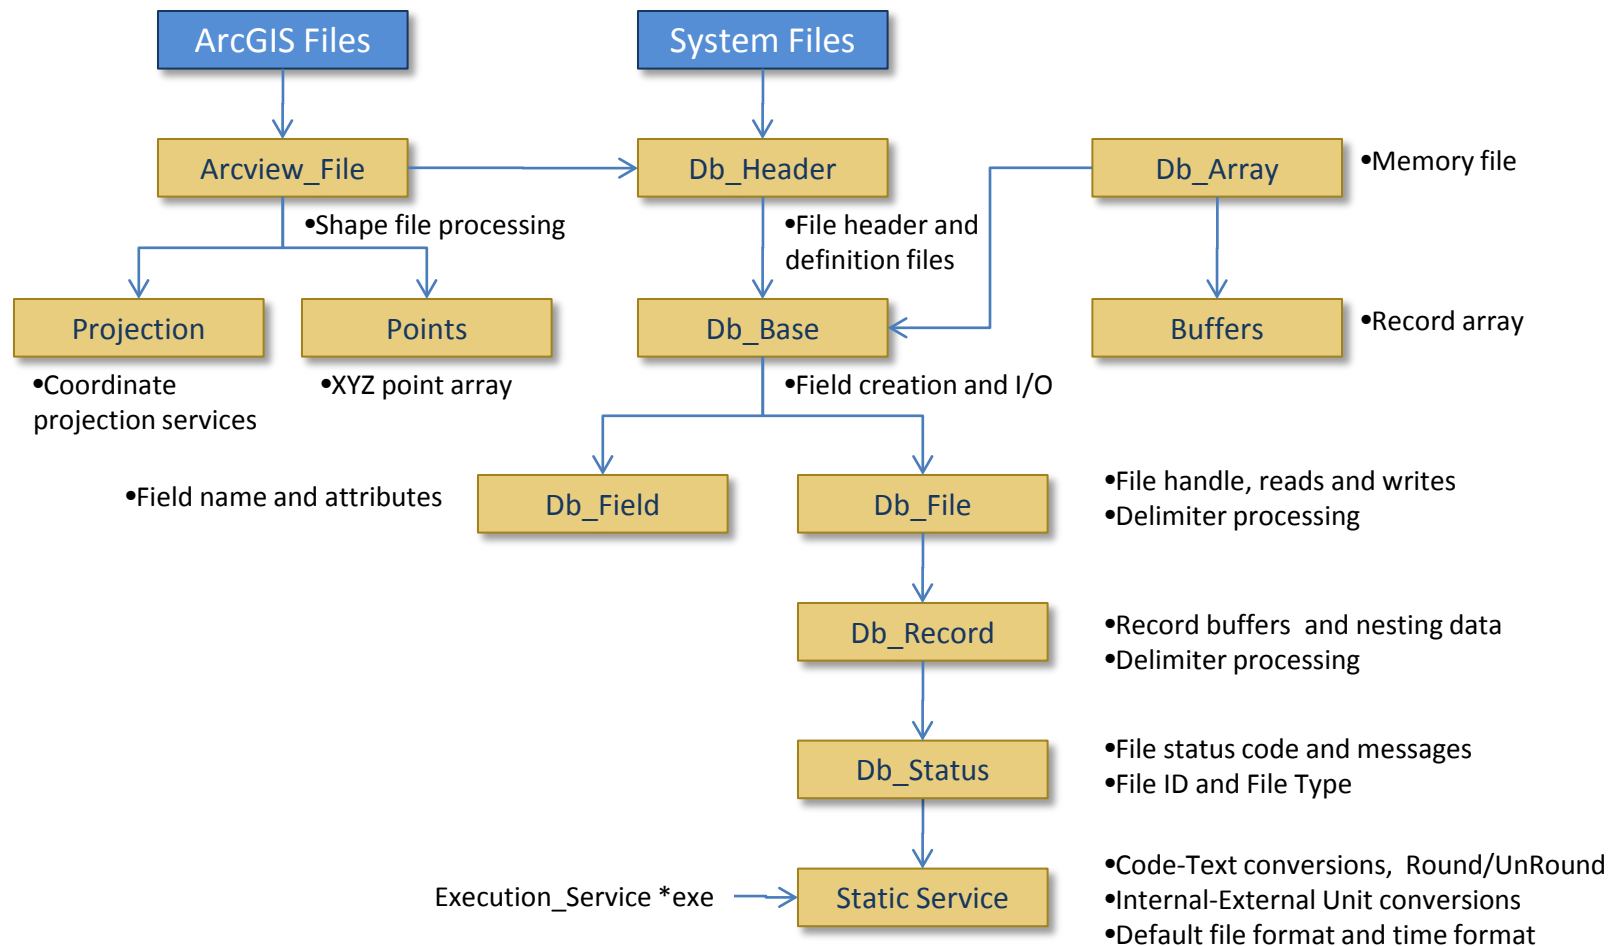

Standard Template Library Extensions

- Custom data containers → C++ STL
 - vectors, maps, iterators, streams, and strings
- Encapsulate and extend STL methods
 - string → String
 - Case insensitive comparisons, trimming, parsing, type conversions, and type safe printf-like formatting
 - streams → Message, Print, Write, XML
 - Managed output to the screen and print files
 - char array → Buffer
 - Dynamic character arrays for binary and text file input and output
 - time → Dtime
 - Day-time data object with input and output formatting

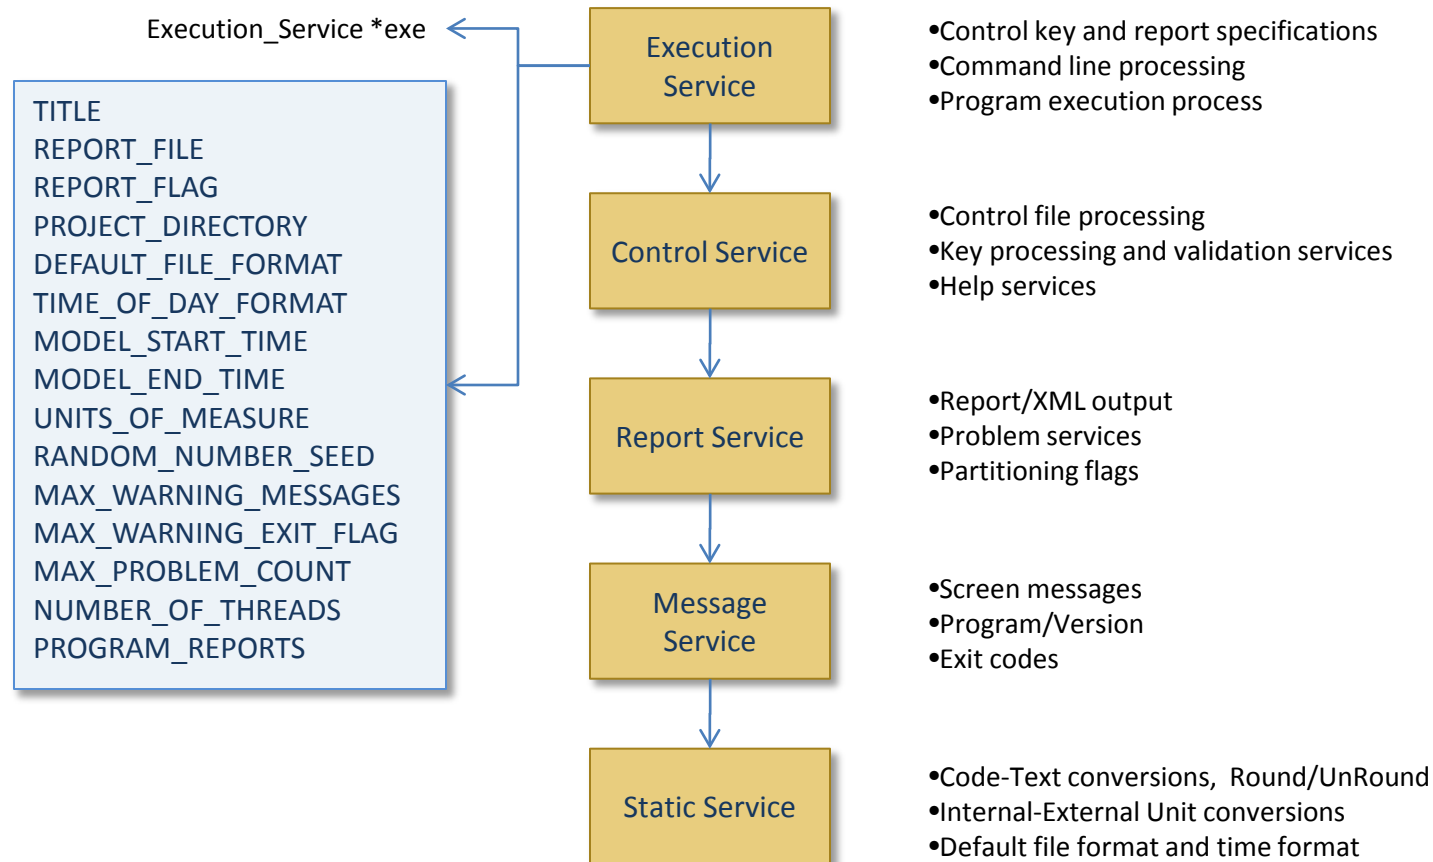

Code Organization and Consolidation

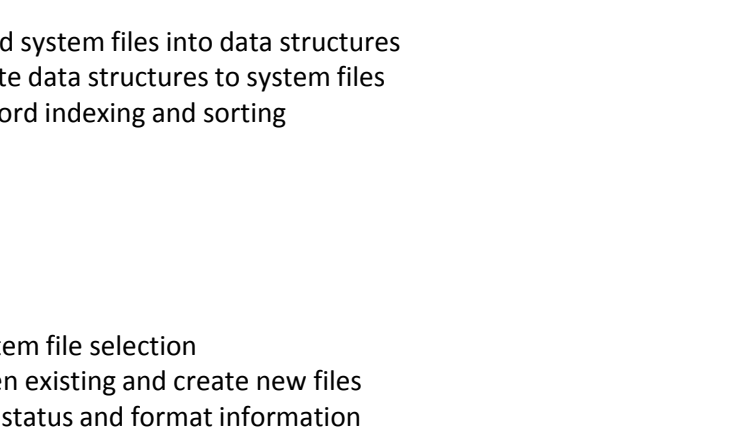

- Enumerations consolidated into one place with static conversion services (text→code, code→text)
- Standard containers and iterators defined in a central TypeDefs library
- SysLib re-grouped and organized as files, data classes, read and write methods, and a series of program services
- Control key structure and processing methods standardize, simplify, and automate user interface and help functions

SysLib Db-File Hierarchy

Low Level Program Services

System File and Format Keys

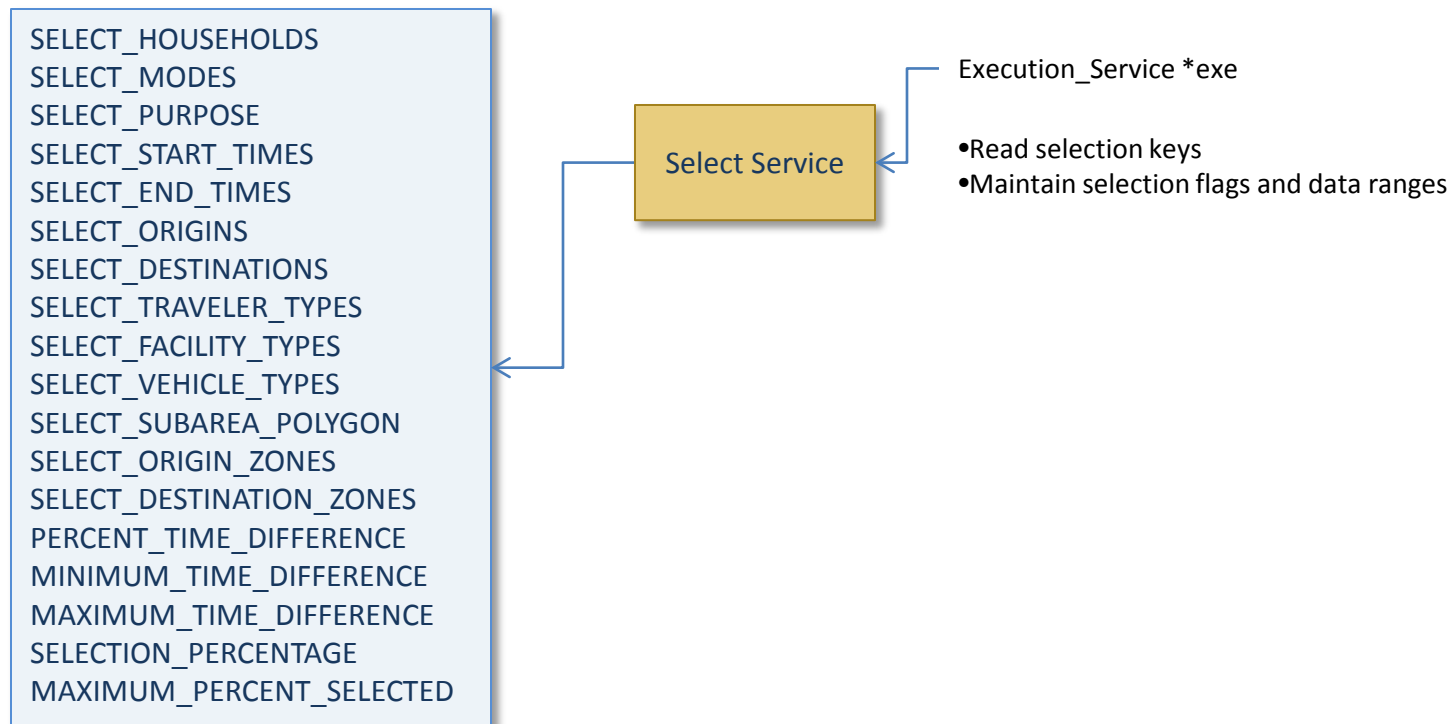

NODE_FILE	NODE_FORMAT
ZONE_FILE	ZONE_FORMAT
SHAPE_FILE	SHAPE_FORMAT
LINK_FILE	LINK_FORMAT
POCKET_FILE	POCKET_FORMAT
LANE_USE_FILE	LANE_USE_FORMAT
CONNECTION_FILE	CONNECTION_FORMAT
TURN_PENALTY_FILE	TURN_PENALTY_FORMAT
PARKING_FILE	PARKING_FORMAT
LOCATION_FILE	LOCATION_FORMAT
ACCESS_FILE	ACCESS_FORMAT
SIGN_FILE	SIGN_FORMAT
SIGNAL_FILE	SIGNAL_FORMAT
PHASING_PLAN_FILE	PHASING_PLAN_FORMAT
TIMING_PLAN_FILE	TIMING_PLAN_FORMAT
DETECTOR_FILE	DETECTOR_FORMAT
TRANSIT_STOP_FILE	TRANSIT_STOP_FORMAT
TRANSIT_FARE_FILE	TRANSIT_FARE_FORMAT
TRANSIT_ROUTE_FILE	TRANSIT_ROUTE_FORMAT
TRANSIT_SCHEDULE_FILE	TRANSIT_SCHEDULE_FORMAT
TRANSIT_DRIVER_FILE	TRANSIT_DRIVER_FORMAT
SELECTION_FILE	SELECTION_FORMAT
HOUSEHOLD_FILE	HOUSEHOLD_FORMAT
LINK_DELAY_FILE	LINK_DELAY_FORMAT
PERFORMANCE_FILE	PERFORMANCE_FORMAT
RIDERSHIP_FILE	RIDERSHIP_FORMAT
VEHICLE_TYPE_FILE	VEHICLE_TYPE_FORMAT
VEHICLE_FILE	VEHICLE_FORMAT
TRIP_FILE	TRIP_FORMAT
PROBLEM_FILE	PROBLEM_FORMAT
PLAN_FILE	PLAN_FORMAT
SKIM_FILE	SKIM_FORMAT

File Service

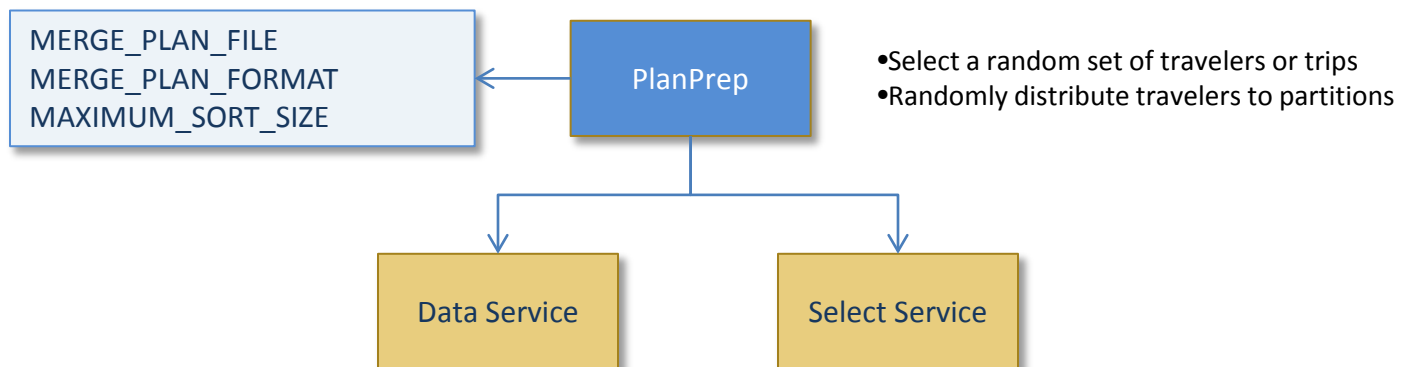

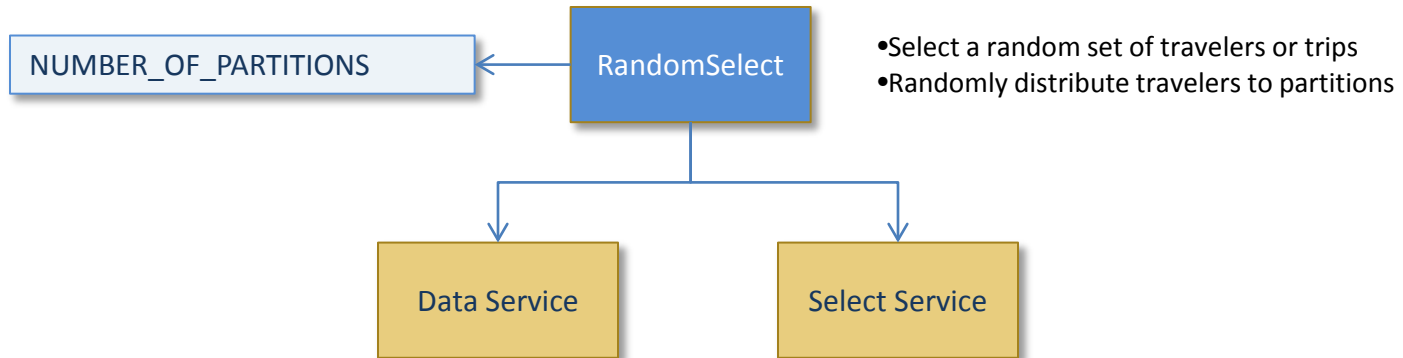

NEW_NODE_FILE	NEW_NODE_FORMAT
NEW_ZONE_FILE	NEW_ZONE_FORMAT
NEW_SHAPE_FILE	NEW_SHAPE_FORMAT
NEW_LINK_FILE	NEW_LINK_FORMAT
NEW_POCKET_FILE	NEW_POCKET_FORMAT
NEW_LANE_USE_FILE	NEW_LANE_USE_FORMAT
NEW_CONNECTION_FILE	NEW_CONNECTION_FORMAT
NEW_TURN_PENALTY_FILE	NEW_TURN_PENALTY_FORMAT
NEW_PARKING_FILE	NEW_PARKING_FORMAT
NEW_LOCATION_FILE	NEW_LOCATION_FORMAT
NEW_ACCESS_FILE	NEW_ACCESS_FORMAT
NEW_SIGN_FILE	NEW_SIGN_FORMAT
NEW_SIGNAL_FILE	NEW_SIGNAL_FORMAT
NEW_PHASING_PLAN_FILE	NEW_PHASING_PLAN_FORMAT
NEW_TIMING_PLAN_FILE	NEW_TIMING_PLAN_FORMAT
NEW_DETECTOR_FILE	NEWDETECTOR_FORMAT
NEW_TRANSIT_STOP_FILE	NEW_TRANSIT_STOP_FORMAT
NEW_TRANSIT_FARE_FILE	NEW_TRANSIT_FARE_FORMAT
NEW_TRANSIT_ROUTE_FILE	NEW_TRANSIT_ROUTE_FORMAT
NEW_TRANSIT_SCHEDULE_FILE	NEW_TRANSIT_SCHEDULE_FORMAT
NEW_TRANSIT_DRIVER_FILE	NEW_TRANSIT_DRIVER_FORMAT
NEW_SELECTION_FILE	NEW_SELECTION_FORMAT
NEW_HOUSEHOLD_FILE	NEW_HOUSEHOLD_FORMAT
NEW_LINK_DELAY_FILE	NEW_LINK_DELAY_FORMAT
NEW_PERFORMANCE_FILE	NEW_PERFORMANCE_FORMAT
NEW_RIDERSHIP_FILE	NEW_RIDERSHIP_FORMAT
NEW_VEHICLE_TYPE_FILE	NEW_VEHICLE_TYPE_FORMAT
NEW_VEHICLE_FILE	NEW_VEHICLE_FORMAT
NEW_TRIP_FILE	NEW_TRIP_FORMAT
NEW_PROBLEM_FILE	NEW_PROBLEM_FORMAT
NEW_PLAN_FILE	NEW_PLAN_FORMAT
NEW_SKIM_FILE	NEW_SKIM_FORMAT

Select Service

- Support service class for selecting data records

Typical Program Linkages

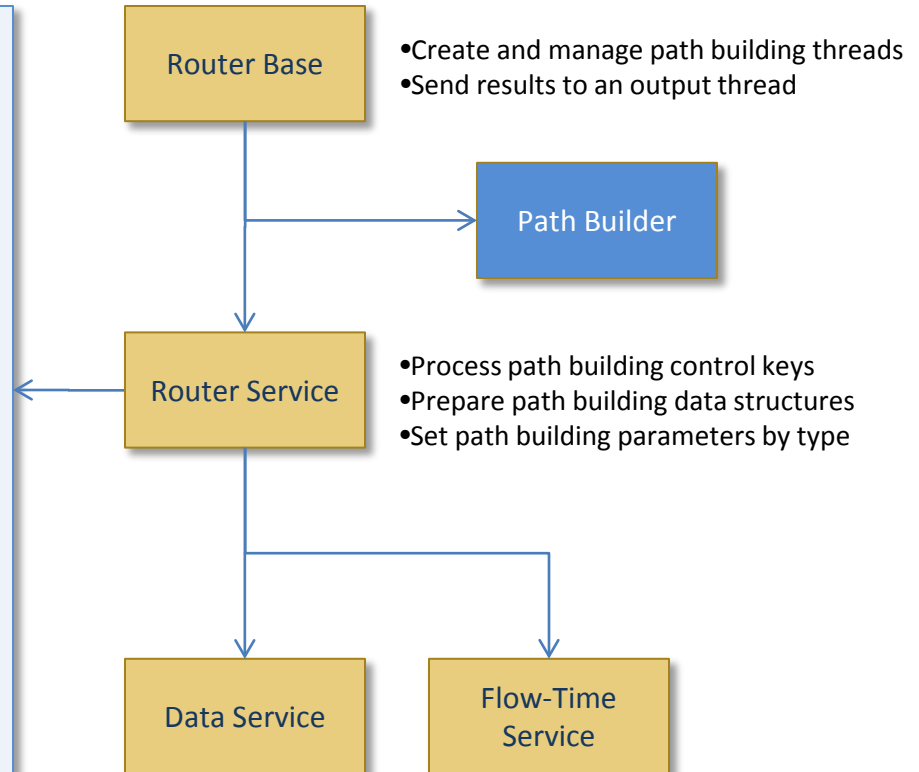

Path Building and Simulation Services

- Builds private data structures for algorithm needs
 - No longer re-defines or over-writes data in SysLib services
 - SysLib creates internal record IDs for all datasets and programs
 - Re-defining data structures not permitted by STL containers
 - Important for DLL and on-the-fly path building
- Path Builder and Simulator modules in SysLib
 - Available to multiple programs and as DLL services to other software
- Path Builder includes two basic options
 - Construct a path for a specific trip of a specific traveler
 - Construct paths or path skims between a user-defined set of origins, destinations, times of day, modes, and vehicle types

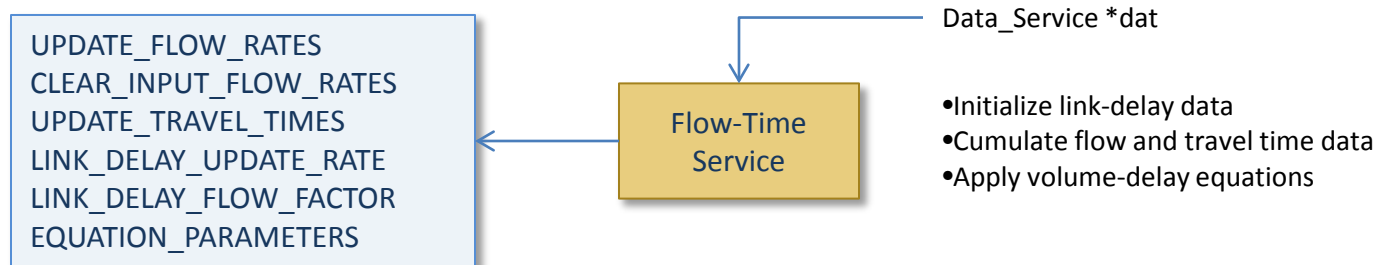

Router Services

IMPEDANCE_SORT_METHOD	STOP_WAITING_PENALTIES
SAVE_ONLY_SKIMS	STATION_WAITING_PENALTIES
WALK_PATH_DETAILS	BUS_BIAS_FACTORS
IGNORE_VEHICLE_ID	BUS_BIAS_CONSTANTS
LIMIT_PARKING_ACCESS	RAIL_BIAS_FACTORS
IGNORE_TIME_CONSTRAINTS	RAIL_BIAS_CONSTANTS
END_TIME_CONSTRAINT	MAX_WALK_DISTANCES
IGNORE_ROUTING_PROBLEMS	MAX_BICYCLE_DISTANCES
PERCENT_RANDOM_IMPEDANCE	MAX_WAIT_TIMES
WALK_SPEED	MIN_WAIT_TIMES
BICYCLE_SPEED	MAX_NUMBER_OF_TRANSFERS
WALK_TIME_VALUES	MAX_NUMBER_OF_PATHS
BICYCLE_TIME_VALUES	MAX_PARK_RIDE_PERCENTAGE
FIRST_WAIT_VALUES	MAX_KISS_RIDE_PERCENTAGE
TRANSFER_WAIT_VALUES	KISS_RIDE_TIME_FACTOR
PARKING_TIME_VALUES	KISS_RIDE_STOP_TYPES
VEHICLE_TIME_VALUES	MAX_KISS_RIDE_DROPOFF_WALK
DISTANCE_VALUES	MAX_LEGS_PER_PATH
COST_VALUES	FARE_CLASS_DISTRIBUTION
FACILITY_BIAS_FACTORS	DEFAULT_PARKING_DURATION
LEFT_TURN_PENALTIES	LOCAL_ACCESS_DISTANCE
RIGHT_TURN_PENALTIES	LOCAL_FACILITY_TYPE
U_TURN_PENALTIES	LOCAL_IMPEDANCE_FACTOR
PARKING_PENALTY_FILE	MAX_CIRCUITY_RATIO
TRANSIT_PENALTY_FILE	MIN_CIRCUITY_DISTANCE
TRANSFER_PENALTIES	MAX_CIRCUITY_DISTANCE

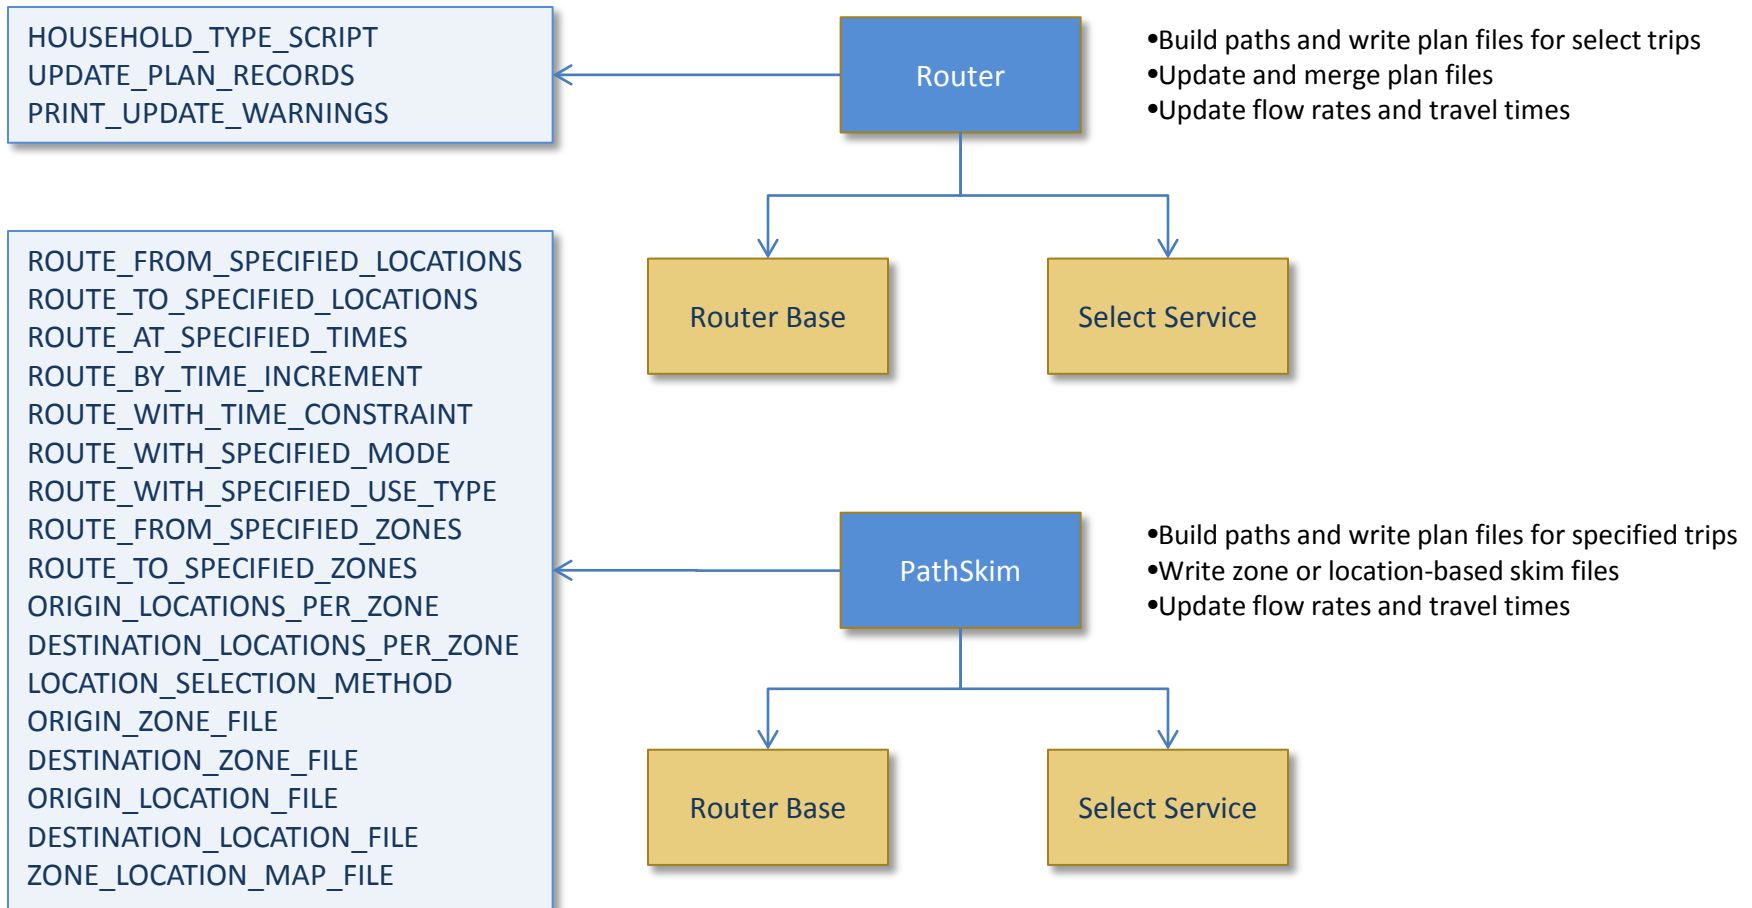

Flow-Time Service

- Support service class for managing link-delay and performance file processing

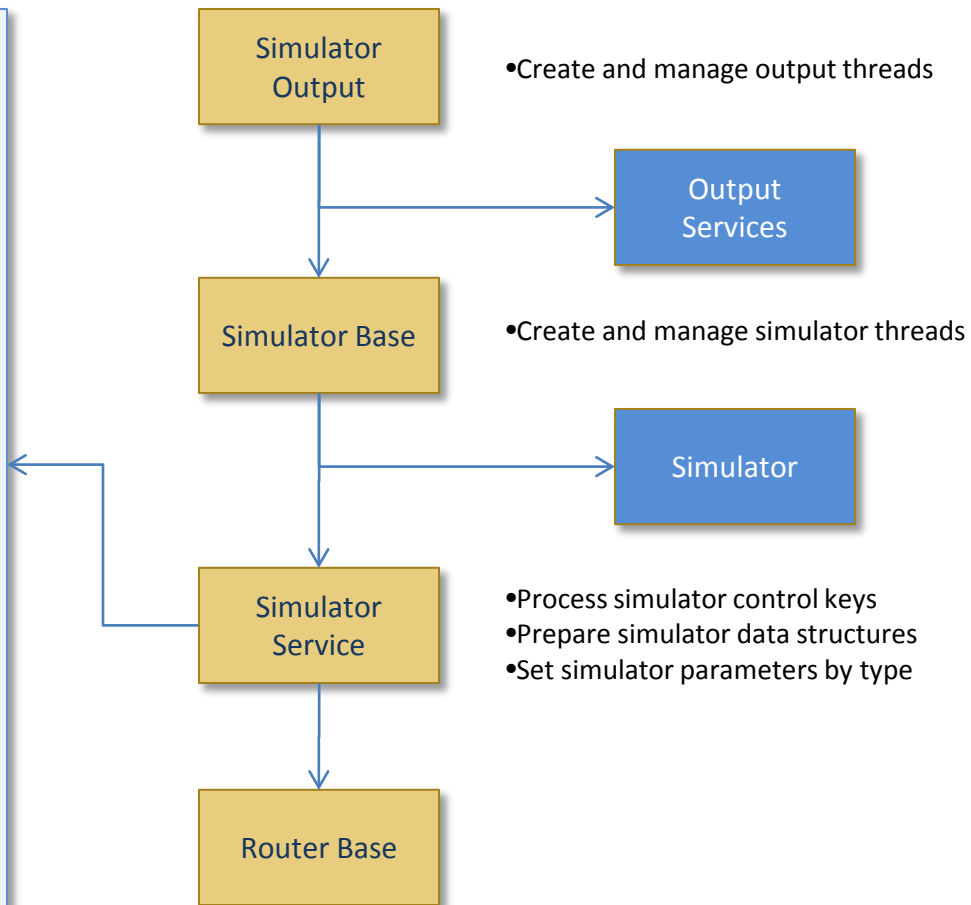

Router and PathSkim Linkages

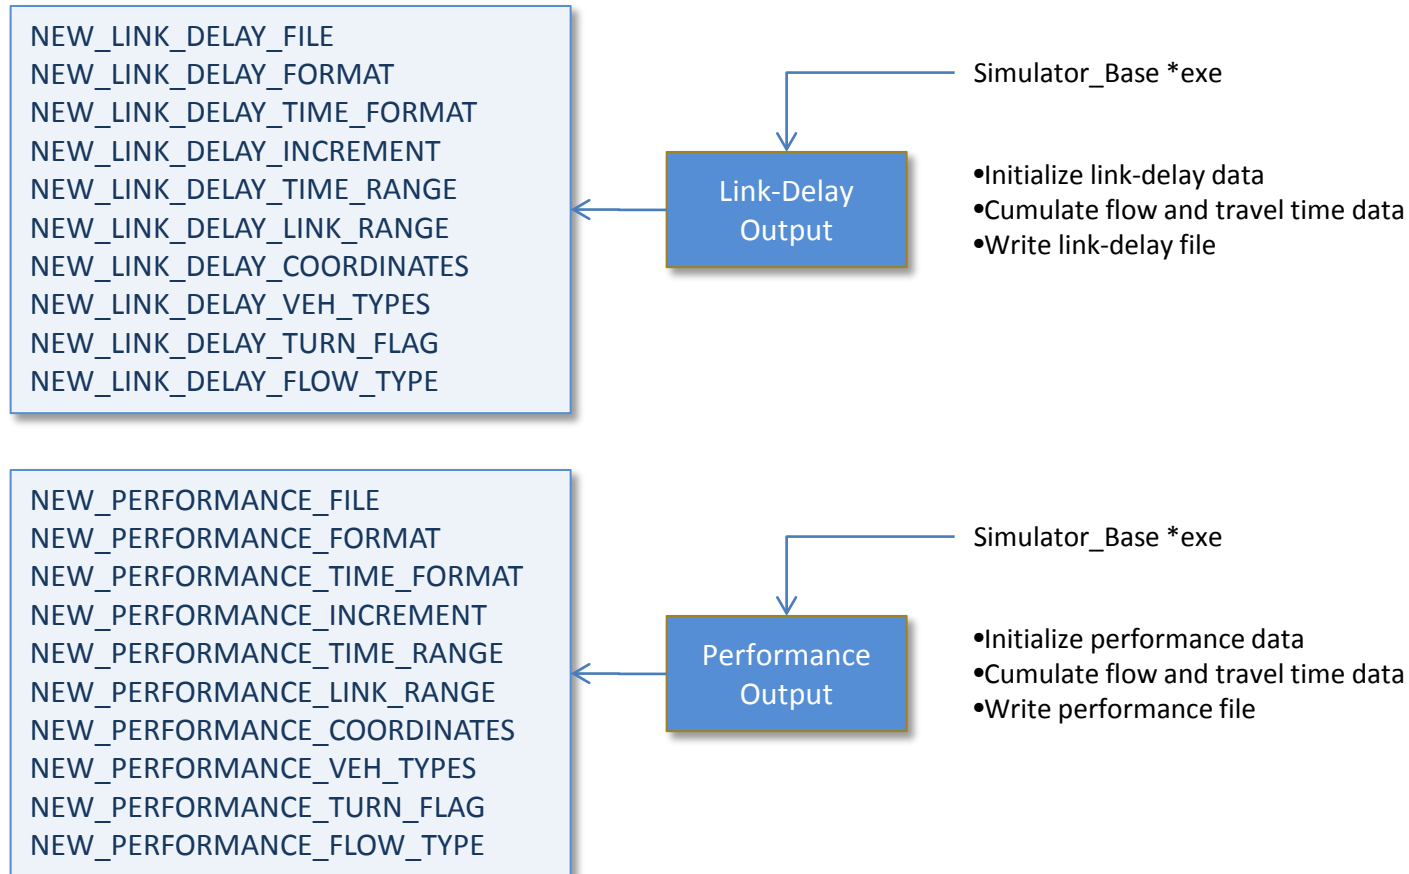

Simulator Services

SIMULATION_START_TIME
SIMULATION_END_TIME
TIME_STEPS_PER_SECOND
SPEED_CALCULATION_METHOD
CELL_SIZE
PLAN_FOLLOWING_DISTANCE
LOOK_AHEAD_DISTANCE
LOOK_AHEAD_LANE_FACTOR
LOOK_AHEAD_TIME_FACTOR
MAXIMUM_SWAPPING_SPEED
MAXIMUM_SPEED_DIFFERENCE
ENFORCE_PARKING_LANES
FIX_VEHICLE_LOCATIONS
DRIVER_REACTION_TIME
PERMISSION_PROBABILITY
SLOW_DOWN_PROBABILITY
SLOW_DOWN_PERCENTAGE
MINIMUM_WAITING_TIME
MAXIMUM_WAITING_TIME
MAX_ARRIVAL_TIME_VARIANCE
MAX_DEPARTURE_TIME_VARIANCE
COUNT_PROBLEM_WARNINGS
PRINT_PROBLEM_MESSAGES

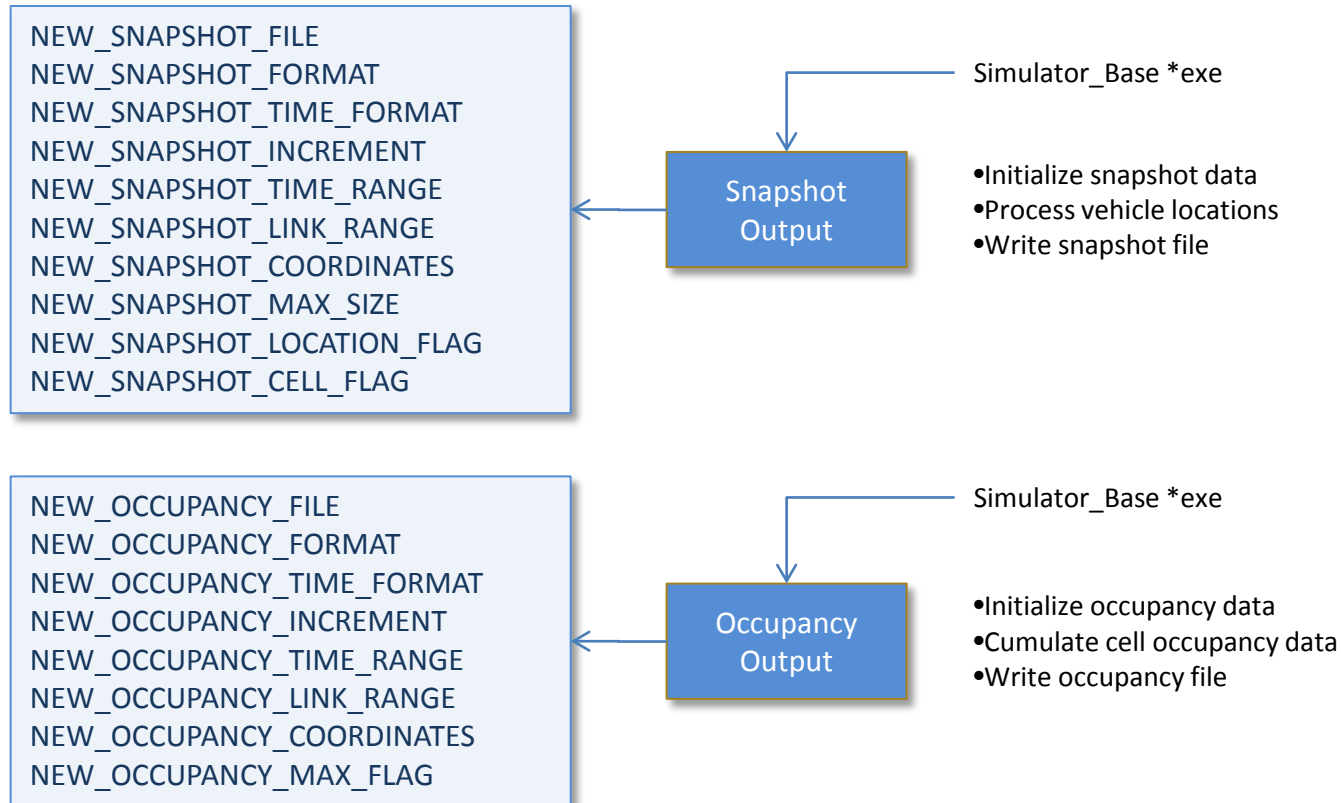

Simulator Output

Link Delay and Performance

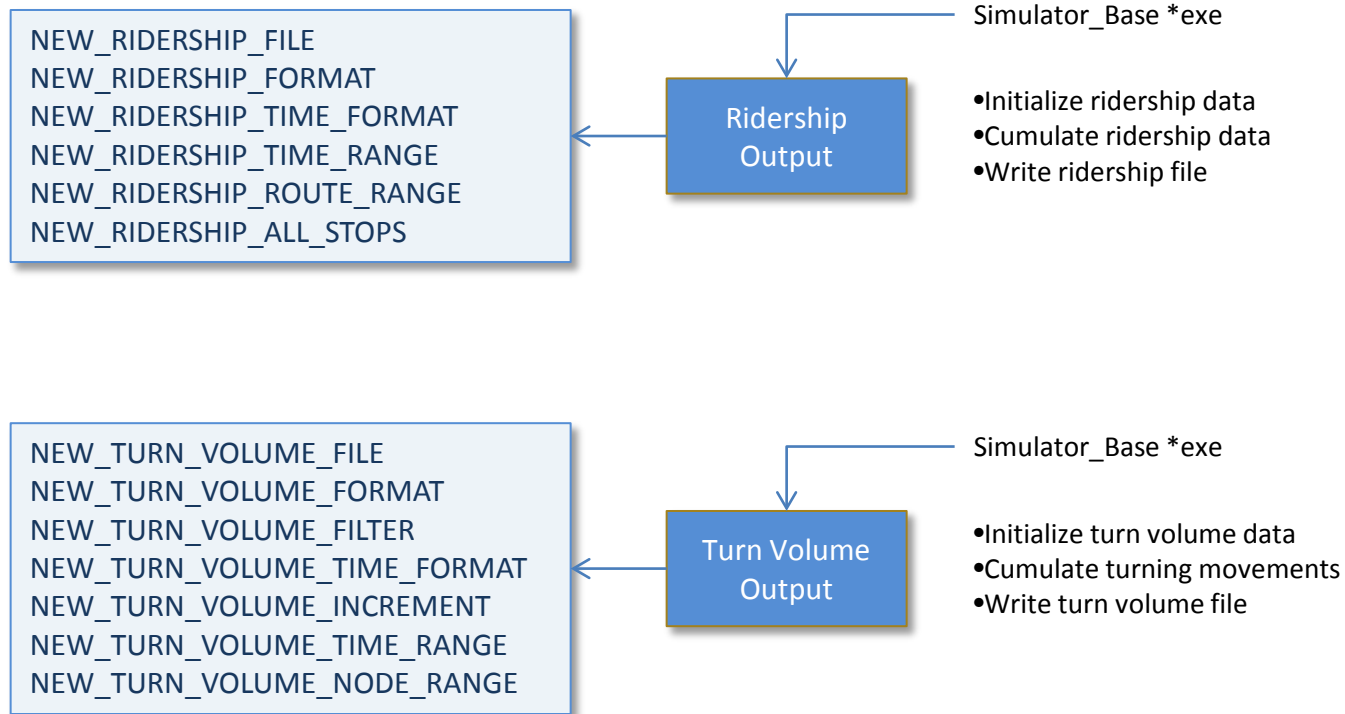

Simulator Output Snapshot and Occupancy

Simulator Output

Ridership and Turn Volume

Multiple Threads, DLL and MPI

- Boost library used for multi-threads
- All SysLib classes available for dynamic linking to other software packages (e.g., Path Builder)
- MPI Microsimulator under development
 - Expand to other thread-ready applications (e.g., Router, PlanPrep)
- Software compiled for multiple platforms
 - Stand-alone single thread – 32 bit and 64 bit (Bin and Bin64)
 - Stand-alone multi-thread – 32 bit and 64 bin (BinBoost, Bin64Boost)
 - DLL single thread – 32 bit and 64 bit (BinDLL and Bin64DLL)
 - DLL multi-thread – 32 bit and 64 bit (BinBoostDLL and Bin64BoostDLL)
 - MPI multi-thread – 32 bit and 64 bit (BinMPI and Bin64MPI)
