PlanCompare Quick Reference

Version 4.0.28

Syntax:

PlanCompare [-flag] [control_file] [partition]

Purpose:
1. Compares two plan files and selects plans that have significantly different travel times.
2. Generate convergence statistics and distribution charts by time of day.
3. Includes walk and wait time in the transit travel time comparisons.
4. Includes options to only compare drive legs.
5. Compares plan files generated on different networks.
6. Compares plan files for specified time periods.

Required Keys

INPUT_PLAN_FILE	[project_directory]*filename*[.partition]
COMPARE_PLAN_FILE	[project_directory]*filename*[.partition]

Optional Keys

TITLE	Text
REPORT_FILE	*Filename*
REPORT_FLAG	FALSE {true/false/yes/no/1/0}

Notes

1	{HOURS, SECONDS, 24_HOUR_CLOCK, 12_HOUR_CLOCK}
2	Time Range (e.g., 0:00..6:00, 18:00..23:00)
3	Zero is used to process each time period as one increment
4	If true, the origin and destination activity locations do not need to be the same in the two plan files to compare the travel times and path differences. This key facilitates compares of travel plans loaded to different networks.
5	If true, only the plan legs between parking lots (drive legs) are compared. This ignores differences in the plan travel times related to walk legs that may be included in one plan file but deleted from the other plan file.
6	The consideration of differences and plan selection is limited to trips that are contained within or span the specified time range.
